ENGINEERED FOR PERFORMANCE

In 1994, Flexfit® Tech was the first to weave stretchable fabric into our headbands and crowns for added elasticity, performance, and comfort. Since then, Flexfit® Technology has evolved and defied conventional headwear mechanics year after year. With a continued focus on innovation, our caps provide the best fit for every unique shape and every demanding application.

TECHNOLOGIES

	FLEXFIT® TECH	Weaves stretchable fabric throughout the cap's crown for a secure and flexible fit.
	PERMACURV®	Visor technology that maintains its proper shape and curve at all times.
	FLEXFIT® MESH	A revolutionary stretchable mesh that provides ultimate ventilation and comfort.
	STAIN BLOCK TECH	This patented technology features a 3-layer multifunctional sweatband that effectively absorbs, stores and diffuses sweat to the undervisor where it evaporates.

HAT COMPONENTS

VISOR A fabric-covered round piece attached to the front of the cap.

Made to help shield the eyes from the sun, visors come in a wide range of shapes and curvatures to cater to a variety of headwear styles.

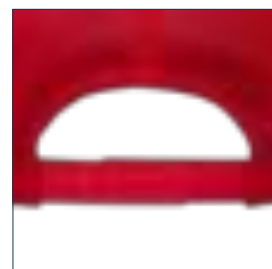

CROWN The distance from the bottom edge of the cap to the top of the head.

This helps determine the depth of the cap. A smaller number means the cap will sit higher on the head while a larger number means the cap will sit lower.

PANELS Triangular pieces of fabric that are stitched together.

These pieces come together to form the main rounded structure of the cap. Depending on the style, caps generally consist of 5 or 6 panels.

CLOSURE The back piece of the cap that determines fit and adjustability.

There is a wide range of closure types such as snapbacks, buckles, and plastic hooks made to give our customers the perfect fit.

PROFILE The slope of the cap's crown.

Low-profile caps tend to have crowns that are more angled while high profile caps have crowns that are more perpendicular to the visor.
